Architecture

Butter
Diagram?

Given a
condition, a
symptom, find
common key words.

NLP?

What do we want?

- Passwordless Auth (Email / phone) → ~~Auth~~ ^{DynamoDB} ~~Handler~~ ^{Handler} } Services
- Centralized DB to ~~ensure~~ reduce onboarding → Auth - S3
- Scalability + reliability + robustness → CGP, AWS, etc....
- No dependency (≠ no libraries) } abstraction... use of HOC
we just want
the freedom to move.
- SOLID principles
- Simple API Integration → Create separate API

Microservice Architecture to
split all the individual components
required

Architecture 2
